Jupiter Laser Visual RTK

Universe Series GNSS Receiver

LASER RTK - INNOVATION MAKES A DIFFERENCE

Features

Seamless Fusion of Laser & Dual-Camera for Next-Level Surveying & Stakeout

Jupiter, an IMU GNSS receiver with advanced laser sensor and dual-camera technologies, is one of the most highly-configured measurement tools on the market. Whether used for surveying or stakeout, it delivers an immersive user experience.

SATELLITE TRACKING		
GPS	L1C/A, L1C, L2P, L2C, L5	
BDS	B1I, B2I, B3I, B1C, B2a, B2b	
GLONASS	L1, L2, L3	
Galileo	E1, E5a, E5b, E6c, E5 AltBOC	

SATELLITE TRACKING		
QZSS	L1C/A, L2C, L5,L1C	
IRNSS	L5	
SBAS	L1C/A	

Laser Technology

Jupiter's precise green laser, visible even in daylight, enables accurate measure-ment of points where using range pole is not feasible. Additionally, the built-in camera overcomes the challenge of targeting points that are too distant to be seen with naked eyes, making field operations faster and more efficient.

Visual Stakeout

With Jupiter's camera, surveyors gain a 3D visual view on Survey Master software. By simply following the directional arrow and real-time distance, with the stakeout point marked directly on the ground, even less experienced operators can stake out points in one go, without moving the pole back and forth.

Super Datalink

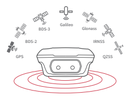
Jupiter's compatibility has been further enhanced. The advanced datalink allows to work with all type GNSS receivers of ComNavTech and receivers of other mainstream brands, and supports a number of protocols, incl. Transparent /TT450S/South/Mac/SNLonglink. With SNLonglink, 15km working range is achievable under ideal conditions.

Auto-IMU

Jupiter is equipped with Auto- IMU, eliminating the need for manual initialization, supporting automatic calibration, and streamlining the operations in the field. It continues to support 120° compensation in conventional, laser and visual modes.

Full-Constellation Multi-Frequency

With 1668 channels and 60+ satellite tracking capabilities, Jupiter also supports HAS&B2b PPP service. Getting fixed in seconds boosts your productivity.



Jupiter Laser Visual RTK

Jupiter Laser Visual RTK is a high-end GNSS receiver that integrates cutting-edge GNSS, IMU, Laser and dual-camera technologies. Building on the advanced laser technology of the Universe Series, Jupiter also incorporates SinoGNSS's latest visual stake-out technology. This combination brings out immersive surveying and stakeout experiences, even in previously hard-to-reach, signal-blocked, or dangerous field.

Equipped with the latest K8 platform, Jupiter tracks 1668 channels for all running and existing constellations. The built-in IMU sensor supports up to 120°tilt compensation, in conventional, laser and visual mode.
